

SeGMo-Assist

Position display for rotatory
and linear position measurements

GEL SEPOD

Technical information

Version 2023-12-05

General

- Display indicator of nominal and actual position to facilitate manual adjustment processes
- Available for either rotatory or linear position measurements

Features

- Plastic housing, ABS
- Operating temperature range 0 °C to +60 °C
- Bright graphical display
 - Representation of customized pictograms
- Degree of protection IP 65
- CAN bus with CANopen protocol (profile CiA 406) or IO Link⁽¹⁾

SEPODR:

- Batteryless, magnetic multiturn encoder
 - Detection range:
129 revolutions, also in de-energized state
- 20.2 mm through hollow shaft, stainless steel

Advantages

- Not sensitive to EMC interference
- Simple cabling
- Extremely compact for confined installation situations
- Ready for use directly after switching on the power due to absolute multiturn position detection
- Freely programmable pictograms for easy user navigation
- Maintenance-free electrical parts

Fields of application

- Packaging machines
- Food and bottling lines
- Wood and plastic processing machines
- General mechanical and systems engineering

Description of SeGMo system

SeGMo-System

The SeGMo-System is suitable for efficient integration of several positioning drives and positioning displays in a machine or a system. The system comprises the following components:

- SeGMo-Positioning:
Positioning drive for fully automatic format setting
- SeGMo-Motion:
Positioning drive for cyclic operation
- SeGMo-Box:
Decentral control unit for up to 5 positioning drives
- Modular SeGMo-Box:
decentral control unit for up to 17 positioning drives or up to 48 positioning displays
- SeGMo-Assist:
Position display for manual adjustment procedures
- SeGMo-Connect:
Single cable concept (hybrid cable suitable for drag chain)
- SeGMo-Lib:
Prefabricated function blocks for integration in the higher level control system
- SeGMo-Support Tool:
Software for extended commissioning and configuration
- SeGMo-Web:
Software for real-time transmission of the modular SeGMo-Box
- SeGMo-ImgConv Tool:
Tool for converting image files into pictograms for SeGMo-Assist

SeGMo-Positioning:

The positioning drives are complete mechatronic systems with a batteryless multiturn encoder, gear and motor as well as integrated power and control electronics. We also offer these items for standalone use. With nominal torques of up to 18 Nm, they cover the typical power range for secondary axes.

SeGMo-Motion:

The positioning drives are complete mechatronic systems with gear and motor as well as integrated power and control electronics for cyclic operation.

SeGMo-Box:

Up to 5 positioning drives can be connected to the SeGMo-Box. The connection of position displays is not provided. The SeGMo-Box supports all common fieldbus and Industrial Ethernet communication interfaces.

Modular SeGMo-Box:

Every modular SeGMo-Box comprises a basic housing with individually equippable plug-in modules. By combining basic housings, up to 17 positioning drives or up to 48 position displays can be connected. A combination of positioning drives and position displays on a modular SeGMo-Box is possible. The power supply can be provided separately for each equipped plug-in module. The modular SeGMo-Box supports all common Industrial Ethernet communication interfaces.

SeGMo-Assist:

The position displays facilitate manual adjustment procedures by displaying nominal and actual positions. Variants are available for rotary and linear applications. Another variant without a measuring system supports the operator, for example, when changing format parts or tools.

SeGMo-Connect:

By using the positioning drives with a SeGMo-Box the cabling effort is considerably reduced by SeGMo-Connect. Instead of the usual two separate cables for internal bus communication and a third cable for power supply to the positioning drives, only **ONE** hybrid cable is connected. In combination with the SeGMo-Box and 5 connected positioning drives, the SeGMo-Connect typically reduces the number of cables from 15 to 5. The hybrid cable is designed for moveable use in drag chains. Its variants are food grade quality, halogen-free and available as a cULus recognized component.

ZB cable IO Link 10 m M12	ZBSGX13

GEL SEPODR — rotatory measuring system

General description

The position display is intended for rotatory position measurement.

The position display is designed for mounting on a machine shaft or spindle. It is connected to a higher level control system directly via the communication interface.

The position display with **CO** communication interface can be connected to the modular SeGMo-Box. This allows all common Industrial Ethernet communication interfaces to be connected.

Connection

The position display is operated with a supply voltage of 20 to 30 V DC. The communication interface controls bus communication and power supply to the position display. The position display requires a functional ground cable to be connected. Connection is via a 6.3 mm flat connector. We recommend a wire cross section of 4 mm² [12 AWG].

Magnetic-absolute multiturn encoder

A magnetic-absolute multiturn encoder makes reference search routines superfluous after a power failure or “EMERGENCY STOP”. After the power supply is switched on, the position display detects its position via the battery-less encoder and is ready for operation directly. When switched off, the sensor shaft can be adjusted by ±64 revolutions without losing the absolute position. The multiturn encoder withstands high shock/vibration loads.

Displays and controls

The position display is equipped with a graphic display. The following values can be read for position measurement:

- Actual position
- Nominal position
- Direction of rotation
- Operating status

Diagnostic displays support the user in troubleshooting.

Menu navigation is via three membrane buttons below the display.

Pictograms

The SeGMo-ImgConv tool can be used to design your own pictograms and thus simplify user navigation. The position display can store up to 40 customized pictograms.

GEL SEPODR — rotatory measuring system

Assembly

The mounting concept provides for fixed-moving bearings. The machine shaft bears the weight of the position display via the fixed bearing. The position display is mounted directly onto the machine shaft via a force-fit connection. A torque support as moving bearing prevents the position display from rotating.

Assembly example

Assembly example: Alignment slot

- 1 Machine housing

Technical data GEL SEPODR_.....

Electrical data	
Supply voltage U_B (polarity reversal protection, overvoltage protection)	20 to 30 V DC
Current consumption	≈ 50 mA at 24 V DC
Power consumption	Power supply unit requirements: Maximum supply output: 100 VA
Communication interfaces	CAN bus with CANopen protocol, (Profile CiA 406); IO Link, V1.1, COM 2 = 38.4 kBaud; no electrical isolation
Mechanical data	
Sensor shaft	Through hollow shaft: Stainless steel rustproof, 20.2 mm diameter
Maximum permissible rotational speed	100 min ⁻¹ at DC = 25 % (DC = duty cycle)
Housing material	Plastic ABS, anthracite
Viewing window material	Plastic, impact protection
Dimensions (not including connectors, not including torque support)	48 mm × 56 mm × 70 mm
Weight	≈ 170 g
Encoder data	
Scanning	magnetic, absolute
Resolution	1000 increments per 360° (freely programmable)
Measuring system detection range	129 revolutions, also in de-energized state
Connections	
Communication interface and supply voltage	5-pin male connector M12, A-coded
Functional ground	Flat connector, 6.3 mm
Controls	
Push-button	3 membrane buttons
Indicators	
Display	OLED 1.54" monochrome, yellow (128 × 64 pixels, graphic) Language: English
Ambient data	
Operating temperature range	0 °C to +60 °C
Storage temperature range	-20 °C to +80 °C
Maximum relative air humidity	Condensation not permitted
Degree of protection	IP 65; as per DIN EN 60529:2014-09
Dielectric strength	500 V AC; as per DIN EN 61439-1:2012-06
EMC ⁽¹⁾	DIN EN 61326-1:2013-07 Class B device with immunity requirements for industrial environments
Vibration resistance	1 to 100 m/s ² (5 to 15 Hz); 100 m/s ² (15 to 159 Hz); as per DIN EN 60068-2-6:2008-10
Shock resistance	800 m/s ² , 6 ms, as per DIN EN 60068-2-27:2010-02
Approvals	
European Economic Area	Conformity in accordance with EMC Directive 2014/30/EU CE

GEL SEPODL — linear and external rotatory measuring system

General description

The position display is intended both for linear position measurement with the external linear sensor GEL SELIN and for external rotatory position measurement with the GEL SEROT.

The position display is attached to the system with two screws. It is connected to the external linear sensor and to a higher level control system.

The position display with **CO** communication interface can be connected to the modular SeGMo-Box. This allows all common Industrial Ethernet communication interfaces to be connected.

Connection

The position display is operated with a supply voltage of 20 to 30 V DC. The communication interface controls bus communication and power supply to the position display and the external linear sensor.

The position display requires a functional ground cable to be connected. Connection is via a 6.3 mm flat connector. We recommend a wire cross section of 4 mm² [12 AWG].

Displays and controls

The position display is equipped with a graphic display. The following values can be read for position measurement:

- Actual position
- Nominal position
- Direction indication
- Operating status

Diagnostic displays support the user in troubleshooting.

Menu navigation is via three membrane buttons below the display.

Pictograms

The SeGMo-ImgConv tool can be used to design your own pictograms and thus simplify user navigation. The position display can store up to 40 customized pictograms.
