Dr. Rudo Grimm appointed managing director

On 1 January 2020 Lenord + Bauer appointed a new chairman of the Management Board: Dr. Rudo Grimm now joins Dr. Matthias Lenord on the management team of the specialist in motion sensors and integrated drive technology.

Dr. Grimm sees the attraction of his new role at Lenord + Bauer as being the innovation potential of the company. Asked about his goals for the future, the father of three answered: "Lenord + Bauer drives forward future solutions with integrated, intelligent, interactive sensors, actuators and autonomous controllers. My goal is to exploit the development know-how, together with Dr. Matthias Lenord, in order to further strengthen our position as a forward-thinking and reliable system partner. Digitalisation and artificial intelligence are the key here. I think we are on a good road, and we will continue to follow it consistently."

In Dr. Grimm, the company has been able to acquire a managing director with a broad industrial background, particularly in the process and railway industry. Prior to moving to Oberhausen, he worked for a management consultancy before taking on roles as commercial director, head of operations and managing director in a variety of mid-sized enterprises with an international presence. For the last five years he headed up a leading company in the rail industry. He also successfully managed a start-up in the e-mobility sector.
